## **Pacific Ozone Receives CE Mark Approval for Integrated Ozone Systems**

Benicia, California, September 16, 2008 – Pacific Ozone, a leading manufacturer of industrial ozone generators and systems, has received CE mark approval for new enhanced versions of its ICS and IOCS integrated ozone systems.

The ICS and IOCS ozone systems eliminate the complexity of integrating the four critical elements of ozone systems: feed gas preparation/oxygen concentration, ozone generation, mass transfer, and process control. The updated CE marked systems are complete and fully integrated ozone systems that seamlessly combine these critical elements into sanitary, splash-resistant, stainless steel skid-based packages.

Standard configurations of the enhanced ICS and IOCS systems include a host of useful features such as Remote On/Off ozone control and Remote Lockout. A PID controller and one or two channels of dissolved ozone detection are also provided for accurate and reproducible system control. In addition, an ambient ozone detector with safety interlock is included on all enhanced ICS and IOCS ozone systems.

“We are enthusiastic to have received CE mark approval on our new ICS and IOCS integrated ozone systems,” noted Chris Rombach, President of Pacific Ozone. “The improved design and expanded range of standard features make the new systems ideal for sanitary applications in food and beverage,” added Rombach. “Safety and reliability are two cornerstones of our product offering, and achieving CE mark approval demonstrates our continuous commitment to product improvement.” The CE mark approval will allow Pacific Ozone to greatly expand its business opportunities in European Union countries.

About Pacific Ozone: Pacific Ozone Technology, Inc. is a leading supplier of air-cooled, corona discharge ozone generators and integrated ozone contacting systems. In addition to ozone products, Pacific Ozone offers engineering support and development services that meet their customer’s application-specific requirements.
